CHARACTER EDUCATION MODEL IN ISLAMIC BOARDING SCHOOL-BASED MADRASA
(The Implementation Of Salih-akram Character Education At Matholiul Falah Islamic Boarding School Pati – Central Java – Indonesia)

ABSTRACT
This study aims to provide a description of character education implemented at Madrasah Mathali’ul Falah (Islamic school) Pati – Central Java. It focuses on how salih-akram character education is applied. A phenomenological-descriptive approach was employed in this qualitative study. The data were gathered by means of observation techniques, interviews, and document studies relevant to the research theme and focus. The findings revealed that MA Mathali’ul Falah is categorized as a Madrasah Mu’adalalah or a Salafi madrasa which is academically focused on tafaqhu fi al-din with a management model type of Islamic boarding school-based madrasa. The vision of salih-akram is embodied in the Nine Basic Values of Salih-Akram (NSDA) as a character model, which is substantively similar to the universal values regarding good character and citizenship. Successful education and character building of salih-akram at MA Mathali’ul Falah are accomplished as it is applied with a holistically integrated education model in the form of Islamic boarding school-based madrasa. Education does not only refer to formal curriculum (subject-matters), but also to hidden one (habituation and modeling).

Key Words: Islamic Education, Madrasa, Islamic Boarding School, Character building, Salih-Akram.

1. INTRODUCTION
The mandate that educational institutions in Indonesia must carry out is to produce and prepare future generations into human beings holistically. It is specifically stated in the Constitution of the National Education System No. 20 of 2003. The goals of the National Education are as follows: “educating the nation’s life and developing the Indonesian people holistically, particularly those who believe and are devoted to the Almighty with a noble character, those who hold knowledge and skills, physical and spiritual health, a strong and independent personality as well as a sense of social and national responsibility”. By fostering and developing all human potentials (gifts of perfection), the educational process is expected to bring humans to the accomplishment of a cultural level that upholds human dignity and humanity (Noor, n.d.)

It must be admitted that it is not an easy thing to achieve this goal because it requires a series of processes, hard work, and synergy of all components of the nation's youth. Education as a system demands all subsystems work in accordance with their respective roles. A number of statistics indicate that our educational outputs have fallen short of expectations, particularly in the context of global stage. The human resource quality of our education system has been unable to

http://ijehss.com/
compete due to various existing shortcomings. An indicator of this is the competitiveness of Indonesia’s human resources (HR) which remains in the 50th place out of 141 countries, trailing Malaysia and Thailand, while Singapore is in first place (Santia, 2021).

Another cause, no less worrying, is the moral degradation of young generations, the manifestations of which may be seen in everyday life. Juvenile delinquency contributes to criminal activities, abuse of drugs, motorcycle gangs/gangster, which are very unsettling to society, promiscuity/premarital sex, and an extensive list of other worrisome cases. These phenomena indicate that character building in our educational institutions is falling short of expectations, resulting in a failure. Nonetheless, a nation’s character building is the most important goal of our educational system. However, we also have to agree that the root causes of these bad occurrences are not simply due to our educational system's failure to provide valuable information for determining and selecting future strategies.

Developments in information and communication technology, as well as massive information spread out through the internet must also be understood as factors contributing to our youth generation's moral degradation. Although these technological advancements have undoubtedly contributed to the transformation of the nation's civilization in global stages and competitions, it is nearly impossible to avoid any impacts resulting from changes in human civilization, which have arrived at an era known as the industrial revolution 4.0 and society 5.0 (supersmart society). This change is unavoidable, and it must be met with all of its consequences. Facing these conditions calls for an ability to adapt to, while protecting and preserving one's identity. Character building as well as fostering nationalism are two approaches to dealing with an unpredictable era brought by such rapid changes.

Undoubtedly, current challenges in the field of education are somewhat significant, if not extraordinarily hefty. On one hand, the rapid pace of change brought about by the industrial revolution 4.0 has caused disruptions in various sectors of life, along with industrial sector. On the other hand, the reality indicates that the community's ability to deal with these changes remains far short of what is required, both in terms of infrastructure and psychological readiness. What usually occurs is that the sophistication of information and communication technology is exploited negatively and ineffectively for the future of young generation.

As a sub-system of national educational institutions with the title of schools with Islamic characteristics, madrasa education systems (MI, MTs, and MA) bear an immense responsibility to exist as a prototype for other educational institutions in terms of character building. Historically, the madrasa education systems arose as a result of the educational institutional transformation of Islamic boarding schools to meet the Muslim community’s expectations for higher quality education according to the demands of the times. Therefore, it is not an exaggeration to claim that the DNA (Deoxyribonucleic Acid) or the origin of Islamic boarding schools and madrasas is Islamic da‘wah. This suggests that the existence of Islamic boarding schools and madrasas is to carry out or prolong the Prophet Muhammad’s (pbuh) apostolic mission, which is to produce Indonesian people with characters or morals. This ideal state gives madrasas a broader mission than other types of educational institutions, such as SMA/SMK (Senior High School/Vocational High School), SMP (Junior High School), and SD (Elementary School).

In addition to the possible derivation of the term "Islamic boarding school", this educational institution has long existed and is indigenous to Indonesia, and it was the starting point to the formation the madrasa education systems. Islamic boarding schools, which exist and thrive mostly
in Java, are products of cultural acculturation between Islam and local culture. In general, Islamic boarding school education system has five main components: (1) boarding schools, (2) mosques, (3) teaching classic literature (*kitab kuning*), (4) students, and (5) *kyai* /religious clerics (Dhofier, 1994). The goals of Islamic boarding school education are: “It is aimed at preparing and developing a Muslim personality, which refers to believing in and having a fear of God, possessing a noble character, benefitting or serving the community by becoming a public servant adhering to the Prophet Muhammad’s personality (following the Prophet’s sunnah), being independent, unrestricted and firm in personality, propagating or upholding Islam and the glory of Muslims in the community (‘izzul Islam wal Muslim), and keeping updated with sciences in order to develop Indonesian personality. The ideal personality is referred to as a Muhsin personality, rather than a Muslim” (Mastuhu, 1994).

As the manifestation of Islamic educational institution with those missions, MA (Madrasah Aliyah - Islamic Senior High School) meets numerous challenges in developing young generation’s characters with Islamic values and portraying the peaceful image of Islam - rahmatan lil alamin. As we all know and feel, one of the threats to Indonesian country today is radicalism and terrorism on behalf of religion (read: Islam). This is due to globalization and sophistication of information and communication technology, which allows the global community can easily access information and acquire knowledge about many aspects of life through the internet. Transnational ideology is a tangible evidence of how dangerous information can be if it is propagated by wrong individuals to those who lack an intellectual capacity to comprehend and filter the information received through the internet or social media.

MA Mathali’ul Falah Islamic School (MA-PIM), also known as “MA Matholi”, is not only a prominent Islamic Senior High School within Pati regency region, but also throughout Central Java province as a madrasa firmly devoted to its mission, called ‘tafaqquh fi al-din’ (in-depth Islamic studies). This educational institution adopts the idea of integrating between educational process and boarding school into an integrated education management system. This is what later qualifies MA as a Madrasah Salaf and an Islamic boarding school-based madrasa (MA Mu’dalah). The MA-PIM’s vision and missions are to transform students into excellent human beings. According to Rozin (Nikmah, 2020), Salih-akram is a transcendental piety in an individual’s relationship with God, and someone who has attained the degree of akram is the one who fears Allah the most. If the concept of salih-akram is thoroughly examined, it is very much in line with the government’s current concern on character building. Character building is substantially more than just teaching children what is right and wrong, it must also establish positive habits, so that they can understand, feel, and have a desire to do good deeds (Fadilah et al., 2021). A person is said to have a noble character if he/she has in-depth knowledge of the existing potential and manifests the potential through attitudes and behavior.

Based on the description above, the researchers seeks to investigate more into data related to what and how salih-akram is, as well as how curriculum design and learning methods are implemented in building students’ characters. A qualitative-descriptive method was employed in this study. Thus, the expected result is to provide a thorough description on the implementation of curriculum model/design at the Islamic boarding school-based madrasa with salih-akram values. The findings of this study are expected to serve as a model for other madrasas/Islamic boarding schools in implementing and improving character building.
2. METHODS

The purpose of this study is to provide a description of character education model applied at Madrasah Aliyah Mathali’ul Falah Kajen, Pati, Central Java. A qualitative method was employed in the study, adopting a phenomenological or descriptive qualitative approach. Based on the data gathered, this study pointed out an analysis of the dynamic nature of relationships between observed phenomena through scientific reasoning instead of statistical analysis (Denzin & Lincoln, 2018; Sugiyono, 2015). In particular, the data were gathered to describe the natural circumstances dealing with the implementation of salih-akram character education at Madrasah Aliyah Mathali’ul Falah.

The data were classified into two categories: primary and secondary data. The former were obtained from interviews with teachers, students and principal, as well as direct observations on selected activities, and documents related to the school. Meanwhile, the latter were obtained from books, journals, previous studies, and several concepts on character education written by experts. The data collection methods comprised of observations, interviews, and documentation (Creswell, 2009; Sugiyono, 2015). Open observations were conducted, so that all teachers could freely provide information regarding the implementation of character education derived from salih-akram values. Interviews were carried out on primary data sources in the form of conversations to obtain information regarding the research focus. Furthermore, the documentation process was conducted in order to collect various documents in the form of concepts and theories related to the subject under study as a theoretical foundation and material to confront with the findings of the study (Creswell, 2009).

After the data collected, they were then processed and analyzed in three stages, (1) data reduction, (2) data display, and (3) data verification (Sugiyono, 2015). These three components were collaborative and interconnected. At the data reduction stage, significant, meaningful, and relevant data were classified and sorted. Following that, those data were presented with a suitable textual framework, so that readers could understand it. The conclusions could finally be drawn (Creswell, 2009).

2. LITERATURE REVIEW

2.1. Islamic Education
a. Definition

There are three Arabic terms etymologically attached to education: tarbiyah, ta’lim, and ta’did. Tarbiyah literally means education, while ta’lim means teaching. Thus, education and teaching are referred to as “tarbiyah wa ta’lim” in Arabic. Meanwhile, Islamic education in Arabic is “tarbiyah Islamiyah” (Daradjat, 2004). According to Al-Nahwali (1989), tarbiyah has three lexical roots; (1) rabba-yarbu, which means to rise, and to grow, as found in the Qur’an (al-Rum: 39); (2) robiya-yarba, which means large, and (3) rabba-yarubbu, which means to fix, and to control in the context of guiding, protecting and maintaining.

As a term and concept, the word al-tarbiyah has several main components: (1) maintaining and strengthening the children’s nature with full attention; (2) developing a variety of talents and readiness; (3) directing the children’s nature and talents into better performances and perfection; and (4) practicing those continually (Hamzah, 2009). A similar view is shared by Abdurrahman al-Bani (Maksum, 1999), claiming that tarbiyah contains three connotative components: (1) protecting and nurturing children, (2) developing children’s talents and potentials based on their
individual characteristics, and (3) directing potentials and talents to attain righteousness and perfection.

Ta’lim is derived from the root word ‘allama-yu’allimu-ta’lim, which means ‘to know’ and ‘to inform’. As a term, ta’lim is defined as a process of transferring knowledge, comprehension, understanding, responsibility, and reliability, resulting in self-cleaning (tazkiyah) from all impurities, preparing oneself to learn wisdom and everything valuable (Jalal, 1977). Ta’lim, which is synonymous to teaching, has a narrower scope than tarbiyah, which is only in the cognitive aspect. Therefore, according to al-Attas (1992), the cognitive aspects implied in ta’lim do not comprise of a fundamental part of the introduction (Al-Attas, 1990). In his opinion, the most suitable term to holistically describe the concept of Islamic education is ta’dib. This term holistically means science (knowledge), teaching (ta’lim), and parenting/education (tarbiyah). Therefore, ta’dib contributes to several aspects, referring to the essence of interrelated education, such as ‘ilm (knowledge), ‘adl (justice), hikmah (wisdom), ‘aml (action), haq (truth), nutq (reasoning), nafs (soul), qolb (heart), aqal (mind), marotib (level-hierarchical order), ayah (symbol), and adab (good manners).

Of all three terms, in the context of Islamic education concept, the term tarbiyah has more strengths for some reasons; First, tarbiyah is more relevant due to its strong transcendental meanings. Although educational activities involve human activities, Islam argues that these activities cannot be separated from and for God. Second, eclectically, the core meanings and connotations of all these terms can be integrated to strengthen the concept of Islamic education. Based on these considerations, according to Maksum (2004), tarbiyah has more social values since the term is more commonly used and/or accepted by Islamic societies (Maksum, 1999).

Based on this linguistic comprehension, experts then created parameters of Islamic education from a number of perspectives, particularly from the relationship between the two concepts: education, and Islam. Tajab et al. (1996) define Islamic education from three perspectives: (1) education of (according to) Islam, (2) education of (in) Islam, and (3) education of Islam (religion) (Tajab, 1996). Education of (according to) Islam has a broader normative meaning, therefore, it constitutes an academically philosophical aspect of a study. The second definition asserts that Islamic education is more socio-historical in nature, implying that it constitutes a historical aspect. According to the third definition, Islamic education is more of a practical procedure in the propagation of Islamic religious teachings, and this is a theoretical component of Islamic education.

Based on this understanding, Islamic education is always defined as a process that develops knowledgeable, faithful, and devoted Muslims to Allah. According to Mustofa and Ally (1998), Islamic education is a process of teachers guiding students’ physical, spiritual, and intellectual development toward Muslim’s character building (Mustofa & Aly, 1998). With a focus on inheritance aspect, Zuhairini et al. (2004:12) define Islamic education as the process of inheriting and developing a human culture rooted and guided by Islamic teachings as stipulated in the Qur’an and explained in the Prophet’s sunnah (Zuhairini, 2004). Islamic education, according to Tafsir (2004), is a guidance offered by an individual to another in order to fully develop in accordance with Islamic principles (Tafsir, 2002). In other words, if this knowledge is simplified, it is a guide for an individual to becoming a Muslim holistically. This implies that Islamic education must be an important component of society, preferably more. It must be developed and implemented in accordance with the social context and needs, particularly in terms of its implementation. This is
in accordance with the essence of Islamic teachings, which is *rahmatan lil-ʾalamin* (Compassion for the Universe)

b. Goals

Despite given various perspectives, one thing in common from various normative formulations regarding the goals of Islamic education is the ultimate goal of Islamic education, which is to produce a holistic and perfect Muslim figure. According to Usa (1991), Islamic education ideally seeks to lead people to achieve personal harmony holistically in order to gain happiness in the world and afterlife (Usa, 1991). In a broader sense, the goal of Islamic education is to promote human beings with awareness and responsibility to carry out the mandates of their caliphate, as well as to enrich themselves with knowledge and without knowing limitations, while also realizing that the essence of life and knowledge originate from and leads to Allah.

Daradjat et al. (2004) refer human figure to *insan kamil*, that is, one who is physically and spiritually intact, may live and develop naturally and normally as a result of his/her piety to Allah The Almighty (Daradjat, 2004). This implies that Islamic education is expected to produce human beings who are beneficial for themselves and society; those who always feel happy and enthusiasm of practicing and developing Islamic teachings in relation to Allah and with fellow human beings; and those have the capacity to take advantages of the universe for the sake of life in this world and hereafter. Based on these goal formulations which are still general, ideal, and abstract, Daradjat distinguishes educational goals into; general goals, ultimate goals, interim goals, and operational goals.

According to Al Ghazali, Islamic education is an education committed to producing excellent individuals who will ultimately enjoy a pleasant life in the world and hereafter by drawing closer to Allah by means of the knowledge they have acquired through the educational process (Agus, 2018). Based on this explanation, Islamic Education is Islamic teachings that involve teachers’ efforts in fostering and developing human potentials in order to produce good Muslim personality traits.

According to Quraish Shihab Daimah (2018), Islamic education aims to develop individuals and groups of people in ways that they can carry out as servants and caliphatess of Allah to carry out their roles as servants and caliphatess of Allah in order to build this world in accordance with the concepts set by Allah and are devoted to Him (Daimah, 2018). According to Syafe’i (2015), Islamic education has a different style from education in general (Syafe’i, 2015). It sees the relationship between humans, God, and the universe as inseparable. It seeks to educate students about their responsibilities as God’s creatures and social beings, and to guide them into good and righteous individuals who represent *khalifatullah fi al-ardh*.

As an object of Islamic education activities, various formulations of the Islamic education goals typically start with a study of human nature or *fitrah*. In the perspective of Islam, humans are entities endowed with various excellent potentials (gift of perfection), including physical and spiritual, soul and mind, as well as *nafs* (carnal soul) and *qolb* (heart). The concept of Islamic education is holistic-integrated, in the sense that it is not dichotomous, on the basis of this belief. All the potentials in humans are represented as a dynamic organic unit that intertwined one another. Therefore, through educational activities, the various potential perfections bestowed by God must be turned or transformed into actual perfection.

c. Institutional Format
The normative concept of education, as a cultural product, demands the use of an institution or organization as a tool to attain agreed-upon values. As a form of social institutions, an educational institution is incorporated within organizations that are relatively set on patterns of conduct, as well as directed roles and relationships in binding individuals. Organization, at the same time, must have both legitimate authority and punishments in order to meet basic social needs (Hendropuspito, 1983). One of the forms of institutions is school system (schooling). According to Brown, A. D. (1989), "Schooling is the institutionalized form of a society's thoughts and ideals regarding education. Schools are designed to protect and nurture the pursuit of educational (and other social) values" (Brown, 1989).

The institutionalization of ideas and concepts of Islamic education as embodied in the formulation of the meanings previously mentioned as well as the goals of Islamic education, turns into very broad and diverse, covering three educational units; formal education, non-formal education, and informal education (UUSPN Number 20 of 2003). This study referred to the institutional format as the form of institution where the process of Islamic education takes place. As stated by Hasbullah (2001), Islamic educational institutions serve as vehicles or places where the process of Islamic education occurs simultaneously with the acculturation process and it starts from family (Hasbullah, 2001).

Before the emergence of madrasa in general, the Islamic education system, goals and resources in nationwide shared similarities with Islamic education in the early years of the rise of Islam in the Middle East (classic period). The teachers/ustaz/kyai/shia at that time were Muslims studying in the Middle East, either those particularly studying religion or those on pilgrimage. Due to the demands and time changes, the Islamic education’s systems and institutions in the classic period eventually went through changes and reformations. As in the Indonesian context, these changes are highly adapted to local (regional) conditions and cultures, the particular goals and visions of the stakeholders and performers of Islamic education in specific settings.

The interaction and acculturation of Islamic missions in the context of culture and local demands resulted in the following institutional model of Islamic education, that is, the existence and development of Islamic education is a process of interaction of Islamic missions under three conditions. First, the interaction between Islam and local or indigenous culture—pre-Islamic—founded pesantren (Islamic boarding schools) through acculturation process. Second, the interaction between Islamic educational missions and modern Middle Eastern traditions further established madrasa educational institutions. And third, the interaction between Islam and the Dutch East Indies educational politics resulted in the establishment of Islamic schools (Suwito & Fauzan, 2004).

d. Madrasa

The term “madrasa” literally means school in Arabic. According to the Regulation of the Minister of Religious Affairs No. 1 of 1952, madrasa is a learning institution regulated as a school adopting Islamic religious education and sciences as subject matters. The madrasa education system has gradually transformed over the years, no longer teaching religious subjects, but also ‘general subjects’ with the same model and composition as public schools (SD/SMP/SMA). The entire madrasa education process adheres to the government's eight educational standards. This sort of madrasa is entitled public school with Islamic characterization. There is no agreement among Islamic (educational) historians on when the title ‘madrasa’ first appeared. Some argued that madrasa was first built and developed in the 5th century H or 10th.
century AD, and some argued that it was established and developed in the 11th century AD, with
the establishment of Madrasah Nidhamiyah in 1065 A.D by Nidham al-Mulk, the prime minister
the Seljuq dynasty (Asrofah, 1999). A similar opinion was expressed by Philip K. Hitti (Syalabi,
was the first madrasa founded at the end of the 4th century H (10th century AD) (Al-Abrosy, 1979).

Following the Nidham al-Mulk’s traditions, Damascus ruler, Nurudin al-Zanky, built several
madrasas. He was the first person to build madrasas in Damascus. Throughout its development,
these madrasas were also founded and expanded from cities to villages in Syria. The biggest
madrasa built by Nuruddin al-Zanky was Madrasah al-Nuriyah al-Kubra (Syalabi, 1973). His
actions inspired Damascus people to also build madrasas, as did the rulers and al-Zank’s family.
These processes continued until the 15th century AD. In the 14th century AD, there were 60
madrasas upholding Shafi’i school of thought, 52 following Hanafi, 4 adopting Maliki, 10 adhering
to Hambali, and 3 al-Tib schools. These madrasas were founded not only by governors, but also
by merchants, scholars, and even women.

Besides Damascus, many madrasas were also built throughout Islamic world, such as those
in Hijaz, Medina, Mecca, Asia Minor, Tunisia, India, and many other places. In general, the
subjects taught in each madrasa are nearly identical, such as religious disciplines regarding
exegesis, fiqh, and many others, yet each madrasa has its own principles influenced by each school
and particular figures.

In Indonesia, this type of madrasa education is divided into three different levels, all of which
employ Arabic terminology: Madrasah Ibtid’iyah (MI), Madrasah Tsanawiyah (MTs), and
Madrasah Aliyah (MA). Sequentially, these madrasa educational institutions are equivalent/similar to elementary, junior high, and senior high school educational institutions. In
general, madrasa educational institutions can be divided into two types. First, there are public
and private madrasas that follow norms and regulations provided by the government, in this case, the
Ministry of Religious Affairs. Second, madrasas’ institutional existence and learning system are
not covered by the government, hence all of their institutional statuses are private. This institution
commonly employs the first model of madrasa. It uses the term “diniyah” (literally means religious
school), hence the terminology used is MI Diniyah, MTs Diniyah, and MA Diniyah.

2.2 Character Education

The term "karakter" is etymologically derived from the English word "character”. The word
karakter is defined in Kamus Besar Bahasa Indonesia (2008), as a character, psychological
features, morals, or manners that separate one person from another, and personality. If it is used
in conjunction with the prefix “be” (a person with a character), it refers to a person with
personality, behavior, character, or nature. The word character is synonymous to personality or
akhlak. According to Koesoema (2007), personality is a characteristic or specific trait or nature of
a person that arises through exposures obtained from the environment, such as family, childhood,
and also inherent (Koesoema, 2007).

The term akhlak is derived from "al-akhlaq" in Arabic which is the plural form of "al-
khuluq" which means character, temperament, behavior, or personality (Ya’kub, 1988). According
to Ibn Maskawih, akhlak is a state of inner activity that pushes towards spontaneous execution of
deeds in the lack of cognition. Meanwhile, according to al-Ghazali, akhlak is a trait that remains
in the soul from which deeds come readily, with no awareness of mind (Djatnika, 1996). In
Indonesian word, akhlaq is equivalent to the meaning of moral and ethics. These two terms are
frequently used interchangeably with manner, morality, conduct, or courtesy (Ismail, 1996). Basically, ethics and moral conceptually have a similar connotation in that they both address human actions and behavior in terms of good and bad values. However, in its application, ethics is more theoretical and philosophical as a reference for analyzing value systems, whereas morality is practical as a standard to assess an individual’s action (Sa'id, 1986: 23-24). Ethics looks into behavior universally, whereas moral looks into it narrowly. In order to apply character, ethics, or moral to a person, a branch of disciplines known as Moral Education, Ethics Education, or Religious Education is introduced.

“How 'good' is a person”? such a question is always associated with character. A person with good character is one who acts in accordance with norms and expectations of society. In the context of education, it is the goal of education (good people). As stated by Suyanto (2009), a character is a way of thinking and behaving that characterizes each individual to live and work together in the context of family, society, nation, and state. Individuals with good character are those capable of making decisions and willing to bear responsibility for any consequences of their decisions. As proposed by Thomas Lickona (1991), "character is a reliable innate disposition to respond to situations in a morally good way”. “How is (good) character built?” The answer is through Education (Lickona, 1991).

Megawangsi (2004) defines character building as an effort to educate children to be capable of making wise decisions and putting them into practice in everyday life, so that they may make positive contributions to their environment (Megawangsi, 2004). Referring to Fakri (2010), character building is a process of transforming life values to be developed in an individual's personality in order that the values be integrated in the person's life behavior (Fakri, 2010). In a school setting, according to Kesuma (2011), character building is: "learning that leads to strengthening and developing a child's behavior holistically based on a particular value referred to by the school" (Kesuma, 2011). To simply put, character building is "the process of shaping behavior based on a particular value". In the context of education in Indonesia, it is clear that the values referred to as educational references are theocentric and anthropocentric values.

The goals of character building are: "to develop students socially, morally and intellectually by integrating character building into every aspect of school culture and curriculum; as well as to help students develop good character, which includes understanding, caring, and acting upon basic moral values such as respect, responsibility, honesty, integrity, and compassion” (Lickona, 1991). Such educational concepts and models are often known as holistic education, because "... the highest goal of education is to produce a holistic person capable of addressing life problems comprehensively”. In a school setting, character building aims to: (a) strengthen and develop vital and essential life values to produce students with distinctive personality, adopting those values in life; (b) preserve students’ behavior associated with the values developed by the school; (c) create harmonious relationships with family and society in consistently implementing character building (Kesuma, 2011).

There are nine pillars of characters derived from universal noble values as follows: (1) devotion to God and all of His creations; (2) self-reliance and responsibility; (3) honesty/trustworthiness, diplomatic; (4) respect and courtesy; (5) generosity, being means of accommodative and teamwork; (6) self-esteem and hard work; (7) leadership and justice; (8) compassion and modesty, and; (9) tolerance, peace, and unity (Azra, 2003). To accomplish such things, the nine pillars must systematically be taught in a holistic and integrated educational paradigm, such as recognizing what is good, feeling what is good, and practicing it well. According
to Zins et al. (2001), character building must begin at a young age (golden age), considering (1) this period significantly determines a child’s growing abilities and potentials in the following periods, (2) various intelligences of adolescence have taken place at 4 years of age (Zins, 2001). Empirically, the factor underlying a child's failures at school is not merely cognitive aspect, but mainly associated with their lack of characters (affective aspects), such as self-esteem, teamwork ability, sociability, concentration ability, empathy, and communication ability. According to Goleman (2010), a person’s social performance is 80% determined by emotional quotient (EQ), while the rest 20% is determined by intelligence quotient (IQ) (Goleman, 1996).

2.3 Islamic Education Curriculum and Missions

The term "kurikulum" is derived from "curriculum" in English, which is derived from “currere" in Greek, which literally means “running distance”, that is, the distance that must be traversed from the start to the finish line. In Arabic, the word for curriculum is “manhaj”, which literally means “bright path” that a person must take in his/her life. In the context of education, curriculum refers to a clear path taken by teachers and students to acquire knowledge, skills, attitudes, and educational values (Addaroini, 2020). Accordig to Act Number 20 of 2003 on National Education System, curriculum is defined as a set of plans and arrangements regarding goals, contents, and learning materials, as well as methods that serve as standards for organizing learning activities to achieve particular educational goals.”

According to Robert Zaiz in Asnawan (2018), curriculum is a resource of subject matters to be mastered (Asnawan, 2018). Whereas, Ronald Doll as cited by Asnawan (2018) defines curriculum as experiences which are presented to students under school’s supervision or direction (Asnawan, 2018). Furthermore, William B. Ragan (Hamdan, 2014) defines curriculum as experiences a child has for which the school bears responsibility (Hamdan, 2014). According to Oemar Hamalik (Addaroini, 2020), curriculum is a written plan emphasizing competencies that must be held in accordance with national standards, subjects that must be learned, and learning experiences that must be required to achieve these abilities, and evaluation that needs to be carried out in order to determine the degree of achievements related to students’ abilities in various educational units to maximize their potentials (Addaroini, 2020).

These various definitions reveal two concepts. First, in a specific sense, curriculum is a teaching or educational program plan provided for students to address the skills that must be acquired, the subjects that must be learned, and the learning experiences that must be completed in order to achieve predetermined educational goals. Second, curriculum in its broadest sense involves all aspects, activities, and students’ experiences under school’s supervision and responsibility, regardless of its intra- or extra-curricular formats in nature, all of which are curriculum in the context of achieving educational goals in school.

Abdul Rahman Salih (Hidayat, 2016), classified curriculum into three domains as contents (materials) to be addressed (studied) or employed as a reference for educational activities, as follows: (a) al-Ulum al-Diniyah, normative Islamic studies serving as the foundation for all existing knowledge, (b) al-Ulum al-Insyaniyah, which covers social sciences and other subjects related to human beings and their interactions, such as sociology, anthropology, psychology, education, etc, (c) al-Ulum al-Kauniyah, natural sciences based on principles of exactness, such as mathematics, physics, chemistry, biology, and others. These three domains correspond to the substantive materials embodied in QS. al-ALAq verse 1-5:
which means: Read! in the name of your Lord who created, who created humans from a clinging clot. Read!, and your Lord is the Most Generous, who taught by the pen, taught humanity what they knew not (Q.S. Al Alaq verse 1-5).

The verses above can be understood as a sign or command on the importance of teaching and learning God principles (religion). The command to read here refers to not only reading the revelation text (Qouliyah al-Qur‘āniyyah verses), but also reading and learning all phenomena existing in the universe as the God’s creations (al-Kauniyyah verse). Learning to read the Qur‘āniyyah verses may lead to religious disciplines such as jurisprudence, monotheism, morality, and the like. Whereas, learning to read the al-Kauniyyah verses may generate natural sciences such as physics, biology, chemistry, astronomy, and the like. These verses provide an abundance of knowledge which can be obtained through the process of learning and reading.

3 RESULTS AND DISCUSSION
3.1. Basic Concept of Salih-Akram

Salih-akram is a concept formulated and developed by the leaders (teachers/ mashayekh) of the Islamic Education Foundation (YPIM) of Mathali‘ul Falah, Pati – Central Java. This concept is an effort to provide the institution with a direction or vision in response to current and future challenges. As explained by Abdul Ghafar Rozin (a prominent YPIM figure), the word "salih" means “horizontal virtue”, “reading the signs of times”, and also “managing life on earth in accordance with the demands of the times”. Whereas, “akram” means “transcendental piety in human relations with God”. Therefore, someone who has attained the degree of akram is one who is fearful of Allah the most (Hariroh, 2021).

The idea and formulation of salih-akram character was inspired by KH. Ahmad Sahal Mahfud. The term salih is generated by the content of the Qur’an Surah al-Anbiya verse 105. Salih in this verse, according to his interpretation and comprehension, is interpreted as those with suitability and eligibility to carry out the task of benefiting the entire globe. The term akram is generated by the Qur’an Surah Al Hujurat verse 13. In this verse, akram is interpreted as a piety to God the Almighty, referring to a person who has a high piety to his/her God. Human beings, as creatures with the mandate to regulate and take control of the earth (khalifatullah fil ard), must be competent and having a pleasant disposition in order to constantly be based on adab fauqol ilmi, harmonizing salih and akram values.

Being a good person (salih) is not an instant process. It involves challenging processes, but that does not make it impossible. Even though we believe that guidance (hidayah) is definite and always present, and that if Allah wishes “kun wayakun”, then anything is possible. Education is a measurable approach to make people better through the use of various resources, methods, and strategies. As stated by Nikmah (2020), if people cannot reach the salih degree, it is appropriate to start with “الحب”, which means “love for pious (salih) people”, “respect for teachers or lecturer”, or engaging with religious figures for blessings (Nikmah, 2020). Thus, by learning from and adhering to Muslim scholars or kyai, people will be able to live a life in accordance with Allah’s commands. In addressing this, K.H. Ahmad Yasir (a MA-PIM teacher/caretaker), quoting a verse from Imam Syafi’i, states "شفاعة نهم أنال آن لعلى # منهم ولست الصالحين أحب" (Although I don’t belong to pious (salih) people, I adore them, and wish I can be a mediator thereupon).

In the perspective of organizational vision, salih-akram is the YPIM’s principal vision as well as its symbolic characteristics as a madrasa with tafaqqah fi ad-din model. Through the vision
and mission, the education programs at all levels of Madrasah Matholi’ul Falah are expected to produce and train cadres of the nation as human beings through religious comprehension in terms of theory and practice, so that they have a capacity to actively contribute to their country (salihi) in the spirit of noble and commendable deity (akram) as demonstrated by the prophet Muhammad (pbuh) (Mahfuds, 2012).

3.2. Salih-Akram as the Character Essence

What is the core concept of how humans should live and how to attain it? To answer the question, the creators of salih-akram concept broke it down into several basic values that serve as operational standards for the education and learning process at MA-PIM. The NDSA (Nilai-nilai Dasar Salih Akram or Salih Akram Basic Values) is made up of nine operational values and 1 complementary value, as follows:

a. **Al-Khirs**: deep love and curiosity for science and knowledge as a source of learning motivation that is unaffected by time and age.
b. **Al-Amanah**: honesty, a basic trait that every individual must possess. In this context, honesty is seen as a trait as well as an effort to avoid mutually harmful rivalry.
c. **Al-Tawadhu’**: humility, where modesty and humbleness are manifested in speech and conduct in the context of social interactions.
d. **Al-Istiqlomah**: discipline in the form of regulation compliance, commitment, and agreement as well as other forms, such as time respect, and adherence to responsibility accomplishment.
e. **Al-Uswah al-Hasanah**: exemplary, as the main principle in leadership, which is developed into communication skills characterized by open, democratic, a role-model figure for others, ready to lead and to be led.
f. **Al-Zuhd**: not materialistic, this characteristic is seen as an attempt to avoid material goods and positions; rather, it is understood as a means of employing these two things as a means of gaining Allah’s blessings.
g. **Al-Kifah Al-Mudawmah**: the courage to take risks and create new things for the development of people, nation, and religion without personal gain.
h. **Al-‘Itimad ala an-Nafs**: independence, a trait to always avoid relying on other people.
i. **Tawasuth**: an effort to identify common ground between various different understandings and perspectives, yet without being extremist to address an issue.
j. **Al-Barakah**: getting more proficient, blessing is both a supplementary and complement element to all components described above.

The formulation and elaboration of salih and akram concept, as recognized by teachers, mashayekh and founders of the Perguruan Islam Mathali’ul Falah (PIM), are reflected from the values of Islamic boarding schools. The PIM scholars strive to adopt the foundation of the school’s typical values. It implies that NDSA characters are the fundamental values reinforced in students with all materials, methods, and strategies. The NDSA is technically formulated into several indicators referring to the guidelines developed by K.H. Muhammad Sahal Mahfud as the mashayekh (founder) of LPIM. If analyzed meticulously, the points in the NDSA are substantially identical to or in accordance with the universal character values and the concept of character building proposed by experts, as described in the sub-chapter above.

3.3 Design and Implementation of MA-PIM Character building

The curriculum currently employed as a reference in the educational process at MA-PIM is the continuation of curriculum implemented by the previous mashayekhs (senior figures). This
refers to the principles embodied in the lafadz إِنَّاَو ج دْن ااٰب اۤء ن اَك ذ الِك َي فْع لُوَْ (we found our fathers or ancestors doing so). There were no valid documents or evidences regarding when the curriculum began. However, one thing is for sure: the curriculum at MA-PIM remains the same as it was in Mecca in the 19th century, when K.H. Ahmad Mahfud studied and stayed in Mecca, Saudi Arabia. According to KH. Ahmad Nailul Faiz, the curriculum applied at MA-PIM shares substantial similarities with that at Pondok Pesanren Lirboyo, Kediri and Pondok Pesanren (Islamic Boarding School) in Sarang Rembang. It is possibly due to the fact that many students from the two Islamic boarding schools studied jointly in Mecca.

Although MA-PIM was founded in 1965 under K.H. MA Sahal Mahfud’s leadership, the embryo of the establishment was pioneered by Kyai Abdussalam in 1912 in terms of MI (Islamic elementary school) and MTs (Islamic junior high school) education formats. Adopting this, a higher Islamic educational institution was later founded in order to accelerate programs regarding with the preparation of future cadres with religious knowledge (tafaqquh fiddin) mastery, to draw closer to Allah (akram), and to be equipped with professional capabilities (salih). The emergence of madrasa was inseparably related to the Dutch colonial government’s policy on prohibiting traditional Islamic boarding schools (pesantren) that invited people to assemble. By establishing madrasa as a center/place of learning, the Dutch did not put any suspicions.

The implementation of the salih-akram values-based curriculum at MA-PIM is based on consideration that students will immediately engage in real life with society after graduating. Therefore, they (students/santri) must be equipped with basic knowledge and practical skills in Islam, social sciences, linguistics, natural sciences, and reasoning abilities. The entire materials and learning methods are disseminated within the NDSA frameworks. This process is aimed at preparing students to become salih and akram with following characteristics, such as displaying scholarly conduct, being devoted to nashrul ilmi (disseminating knowledge) and benefitting ummah (society), and being capable of developing the fundamental Islamic knowledge.

With all of these changes taking place through the years, MA-PIM positively responded them by reviewing and developing in accordance with the needs of the context. The inclusion of several “general subjects” indicates that this educational institution pays attention to the needs of its graduates in society once they graduate. Nonetheless, the addition of those general subjects have little effect on the amount of study hours, in which Mata Pelajaran Agama (Religious Subjects) takes up 70% of the study time, and Mata Pelajaran Umum (general subjects) amounts for 30%. This composition indicates that the MA-PIM curriculum seeks to integrate the goals of national education and the great ideals of the Perguruan Islam Mathali’ul Falah, which is to prepare students with capacity to discover, live, practice, and develop Islam holistically, as well as to deal with social issues. In terms of this curriculum structure and composition, MA-PIM, as a madrasa-based education system, adopts the concept of Islamic boarding school (pesantren) education, often known as Islamic Boarding School-Based Madrasa. Among the general subjects added to the MA-PIM curriculum are Pendidikan Moral Pancasila (Pancasila Moral Education) and Pendidikan Kewarganegaraan (Civic Education).

Another name or title attached to MA-PIM is Madrasah Salaf. The title refers to the characters of tafaqquh fi ad-din (religious studies), education, and learning provided to improve religious knowledge and to equip students with noble characters as well as being prepared and competent in dealing with a rapidly changing world. The religion in this context, according to K.H. Sahal Mahfud, is Islam, aiming at educating and preparing national cadres as human beings who thoroughly comprehend the religion both in terms of in theory and practice in order to play an
active role in life of the nation (salih) in the spirit of divinity with nobility and praiseworthy (akram) as demonstrated by the Prophet Muhammad (pbuh). In order to assess the implementation of salih-akram character building, it must be distinguished between the periods preceding and following the formation of the curriculum team (curriculum reviewers and developer team). Before the curriculum team was formed, the methods for internalizing NDSA were demonstrated through the examples of natural mashayekh’s conducts (hidden curriculum). Teachers typically introduced moral and character values (insertion models) in all subjects between learning activities. Once curriculum team was formed, the stages carried out in NDSA Education became more systematic since the curriculum was structured in such a way that NDSA internalization was designed formally and systematically.

Contents (teaching materials) and learning methods (strategies) have been formulated referring to the accomplishments (understanding) and actions (charity) of salih and akram characters. From the description above, when analyzed in terms of education management, MA-PIM adopts/applies the holistic-integrated education management model. That is, the domains in the educational process include various gifts of perfection – physically and spiritually, mind and soul, nafs and qolb. All of these potentials are viewed as dynamically interacting living entities that must be developed or manifested into actual perfection.

3.4 The NDSA Character Education Strategy

In order to achieve salih and akram characters, it requires learning materials that contribute to the achievement of those characters. The materials that must be mastered in this case is Ulumuddin (religious sciences). The concept of tafaqquh fi ad-din (understanding religious topics) is introduced on the basis of this logical reasoning. Understanding religious studies is required in order to achieve salih and akram, as salih is not necessarily faqqih fi ad-din. Hence, if salih is faqqih fi ad-din, it can lead a person to be a light for his/her social environment, with the hope that he/she will someday be a scholar who provides light for those around him/her. According to the Deputy Director of curriculum’s assessment and explanation, the contents in the MA-PIM curriculum constitute salih-akram, such as materials derived from the book entitled Ta’limul Muta’allim, which does not only teach about being good to people, but also to God and His Prophets.

In terms of aqida education (tawhid – belief in Oneness of Allah), it is also associated with salih-akram education. The outputs and outcomes of this learning are to nurture the characters of accepting everything sincerely because you believe that everything in this world belongs to Allah the Almighty. Similarly, Tasawuf lesson, as a subject-matter, points out more on aspects related to akhlak karimah (nobleness) in horizontal (among humans) and vertical relationships (worship of Allah). A well-organized and well-designed learning environment (physical and non-physical) which promotes good conduct habituation (amaliyah) as a reflection and manifestation of salih-akram characters are equally significant as well.

The atmosphere of habituation and role-modeling is also quite evident, as indicated by the teachers (based on the interviews) and clearly seen (observation) in daily life in the madrasa/pesantren. Such conditions suggest that a vital concept or stressing point in salih-akram character building is through the teachers or mashayekh’s role-models. The important thing that supports the effectiveness of salih-akram character building is environment and culture (atmosphere) available at Mathali’ul Falah, which truly contribute to character building because an educative culture has been created. Anyone enrolled at PIM will find it easy to adapt to their surroundings. When someone joins Mathali’ul Falah, directly or indirectly, they must adhere to
Mathali’ul Falah’s traditions. Without even noticing it, everyone in LPIM will behave according to salih-akrom characters. This implies that MA-PIM employs a learning strategy habituation based on the concepts of knowing what is good, feeling what is good, and practicing what is good.

As clarified by K.H. Mu’ in Ni’am, salih-akram character belongs to PIM mashayekh, such as K.H. Ahmad Sahal Mahfud, K.H. Ahmad Nafi’ Abdillah, K.H. Zakki Fuad Abdillah, and K.H. Muadz Thohir, because they do not only embody high virtue, but also a strong foundation in sharia, and have a fighting commitment in propagating Islamic da’wah through education. To ensure that teachers may serve as role models for students, they follow the rules (code of ethics) as PIM teachers. Therefore, if there are teachers who do not follow the guidelines, there will be a mechanism to rectify/reprimand by those in charge.

The interesting part about the MA-PIM learning activities is that the teaching and learning methods and materials employed by the teachers in building salih-akram character is through imitating (read: replicating) what the previous mashayekhs or senior teachers did. Furthermore, the teachers and caretakers’ conducts consistently serve as an exemplary role model for students, all of which refer to NDSA values. Dealing with the graduate profiles produced by the MA-PIM learning system, K.H. Ahmad Sahal Mahfud pointed out that the MA-PIM education program is committed to preparing (the students), instead of shaping (them). The word “prepare” means to provide information as much as possible through a variety of learning activities. On the basis of this perspective, the MA-PIM’s role model in character building at is derived from the exemplary conducts displayed by the teachers and mashayekhs. This method, as acknowledged by the teachers as well as the students, is more effective in the process of NDSA values internalization.

The salih-akram character building is proven to have gained success through several MA-PIM graduates who earned credits by the public for occupying public positions, such as K.H. Ahmad Sahal Mahfud with his accomplishment as the President of Nahdatul Ulama Organization (Rais Aam PBNU) along with the chairman of the Head Office of Indonesian Ulema Council (MUI), Kyai Imam Aziz who was named as an Indonesian multicultural figure by the Islamic Fair of Indonesia (IFI) organization, Ulil Abshar Abdalla as the Director of the Research and Development Institute of Human Resources (Lakpesdam NU), Marwan Ja’far as a member of DPR (the House of Representatives) of the Republic of Indonesia in 2009 as well as the Minister of Villages, Development of Disadvantaged Regions, and Transmigration for the 2014-2016 period, Badriyah Fayumi as a member of DPR (the House of Representatives) of the Republic of Indonesia as well as the Executive Board of Nahdatul Ulama, and so on.

Despite the fact that the curriculum design implemented at MA-PIM does not fully adopt the curriculum set by the Ministry of Religious Affairs, the institutional and academic legitimacy of its educational process and outputs are officially recognized by the Ministry of Religious Affairs as the stakeholder and authorized party of madrasa education. The recognition is stated in the MA-PIM format, which is legally recognized as Madrasah Mu’adalah, an Islamic education unit organized by and within the Islamic boarding school environment through the curriculum development in accordance with the unique characteristics of Islamic boarding school on the basis of kitab kuning (classic literature) or dirasah Islamiyah, with a hierarchical and structured pattern of muallimin education that corresponds to the levels of primary and secondary education in the Ministry of Religious Affairs (the Regulation of Minister of Religious Affairs of the Republic of Indonesia No. 18 of 2014). In terms of competence, MA-PIM graduates gain more values in mastery of the basic and development of Islam than other public MA graduates despite their school’s Islamic characteristics status. Another result of the government’s recognition of this
education system is the inclusion of general subjects in the madrasa curriculum, such as social sciences, linguistics, natural sciences and reasoning, and the like. Another advantage of the Mu’adalah status is that MA-PIM retains full autonomy in various aspects, starting from its curriculum (teaching materials), learning models, management systems, and other educational technical issues. This institutional status and condition allow MA-PIM to effectively implement and develop a model of salih-akram character building.

4. CONCLUSION

Based on the data and analysis described above, it can be concluded that the following points are important: First, the character building model with salih-akram values adopted at MA-PIM has proven to be effective in developing its students’ characters in accordance with the institution’s vision. The development of the salih-akram concept by teachers, community members, and madrasa managers suggests that through autonomy and spirit of school-based management, it possibly promotes a region’s local wisdom and uniqueness to make it global – think globally, act locally. Second, the dominant factor for the success of salih-akram character building at MA-PIM is through modeling (uswatun khasanah) shown by the teachers, mashayehkhs, and madrasa community in a hidden curriculum format, where things in the environment (madrasa area) is a form of curriculum that prepares students to do or to not do according to the NDSA values. This does not necessarily mean that formal curriculum is of little significance, it is indeed important. In order to attain NDSA values, a student must learn religious norms or sciences as well as other subjects stipulated in the curriculum in accordance with the following stages of character building: knowing what is good, feeling what is good, and practicing what is good. At MA-PIM, Ulumuddin (religious studies) at MA-PIM is taught using the pesantren learning model with kitab kuning (classic literature) resources as a reference for teaching materials. This learning model, therefore, earned MA-PIM the title of madrasah salaf model with tafaquh fi ad-dien. Third, the curriculum structures at MA-PIM in terms of content (subjects) can be divided into three categories: basic (fundamental/principal teachings of Islam or Ulumuddin), supplementary (additional knowledge/tools to support basic components), and complementary (general knowledge). In terms of assessment system, two assessment models have been implemented: (1) learning assessment for promotion grades, and (2) learning assessment for graduation. Fourth, MA-PIM was recognized as Madrasah Mua’adalah due to its reputation and accomplishments in religious studies learning in the category of tafaquh fi ad-dien. Since the religious studies learning model adopted the pesantren (Islamic boarding school) model, MA-PIM received the title of Madarasah Salaf or Islamic boarding school-based madrasa.
